

KAIZRUG CLEAN REFERENCE v2026.09

Operator: Joel Kaizire | Systems & Hospitality | Dubai

Generated: 2026-09-17 | System: Kaizrug HQ v2026.2 + Law 002 Clean Core

Canonical Web: <https://rca-site.pages.dev>

0. Purpose

Single source of truth to strike @royal_connectafrica functionality and re-activate RCA. Desktop = execution, GitHub = public truth, Drive = Cold Vault + mapping. This doc reconciles Notion archives + KX-template + RCA canonicity per P0 merge SHA 4ea493b0dfad8bc6df9d3b4652dfdd45f122b404.

1. Boundary Rules (from kaizrug-os BOUNDARIES.md)

- If it runs → Notion (CC v2026.2)
- If it is tested → GitLab / local RCA
- If it is explained → GitHub (kayzjoel-hue/kaizrug-os, rca-upgrade)
- If it is sold → Web (rca-site.pages.dev)
- If it earns → Products / Revenue ledger

2. RCA Canonicity — P0 RESOLVED

- Canonical public web: `rca-sites` → explicitly declares <https://rca-site.pages.dev>
 - Evidence: rca-upgrade README: "Canonical live site: <https://rca-site.pages.dev>" and "current confirmed public deployment is on Cloudflare Pages"
 - kaizrug-os README lists RCA as public proof link
- Supporting/private engineering: `rca-main` → explicitly prevented from competing website
- HQ merge: kaizrug-hq PR #2 merged, registry governance locked
- Live verification: rca-site.pages.dev shows Bridging Two Worlds, 3 pillars (Tourism & Journeys, Trade & Commerce, Knowledge & Ebook), AI Concierge, Ethical Trade Channels

Desktop Execution Chain:

C:\Users\X1 CARBON\Desktop\RCA\rca-upgrade.env → git push → kayzjoel-hue/rca-upgrade → rca-sites → Cloudflare Pages → <https://rca-site.pages.dev>

Instagram:

- @royal_connectafrica = service layer (Travel agent)

- joel__sync / joel.kaizire = operator layer
- Bio: UAE ↔ East Africa | Tours · Trade · Relocation | DM 'RCA'
- Link must be canonical, not africca.tours typo

7. Open Loops for RCA (to close in upgrade)

From KX-DB-10 + conversation:

- KX-LP-060 — Revenue Node #1 — implement Stripe Digital Templates link on rca-site.pages.dev

- KX-LP-080 — Financial Truth — log first AED revenue (even 0) to close loop
- KX-LP-01 — Fix Gmail → Notion to label-only to stop task burn
- Booking-system runtime/payment proof — P1 per P0 chat — add booking flow + payment verification
- RCA live-runtime verification — verify <https://rca-site.pages.dev> loads with AI Concierge working (Gemini key from .env)
- IG reactivation — post 3 proof journeys from Media & Content

8. P1 Upgrade Design — Starting Point

Goal: RCA v2 — upgrade from static brochure to booking + trade + knowledge monetization

Proposed stack (from Truth Stack Automation doc):

- Frontend: rca-upgrade (static HTML + Tailwind) — already in Drive — deploy via desktop to Cloudflare Pages (canonical)
- AI Concierge: api/ai.js → Gemini 1.5 Flash — uses GEMINI_API_KEY from desktop .env — keep Vercel as fallback only
- Booking: Make.com scenario — Form → Parse → Notion KX-DB-11 Deals → If high value → WhatsApp via Twilio / WhatsApp Cloud — log in Input Gate
- Human-in-loop: Relay.app — AI draft itinerary → pause → Joel approves → sends
- Data sync: Whalesync — Notion Curated Journeys ↔ Webflow/Cloudflare
- Client portal: Softr — read-only view of shipment status for Trade partners
- Sovereign: n8n self-host for sensitive trade contracts

Deliverables for upgrade:

1. rca-sites repo declares canonical + noindex on rca-main
2. /booking page with Calendly + Stripe Payment Link (AED 49 Menu Fix style for RCA)
3. /trade page with Export Catalog PDF embed + inquiry form → Formspree → Make
4. /ebook page — placeholder for RCA Ebook coming soon → Gumroad/Stripe
5. IG feed: 9-grid with Dubai ↔ East Africa proof, link in bio = canonical
